* DC = Davidson County
RC = Rutherford County
** Only 1 Resilience Kit per Family

How We Positively Change Lives, Families, & Futures!!

We're on a *mission to break multigenerational cycles of childhood trauma* because neurological; psychological; sociological research shows that ACEs (Adverse Childhood Experiences/Adverse Community Environments), if not prevented or mitigated, can create toxic stress that changes children's brains and affects epigenetics. Through our Family Resilience & Organizational Resilience programs we're helping ensure children, families, and the organizations working with them have education, skills, and support to prepare them for success. We know that by working more holistically across families and organizations, we'll move closer to *our vision of a resilient community where all children thrive!!*

86%
of our parents experienced trauma as children

60%
of adults in the US experienced at least 1 ACE

> 54%
of our parents earn less than 30K annually

> 32%
are currently unemployed

More ACEs = Increased Risk

As the number of ACEs increase, so does the risk for negative outcomes

Our Families

69% of our parents have **4+ ACEs**

47% of our parents have **6+ ACEs**

5% of our parents have **10+ ACEs**

After Our Programs:
